Healthcare Spending, Life Expectancy and National Wealth

Bubble size = Average GDP per Capita | 36-country sample

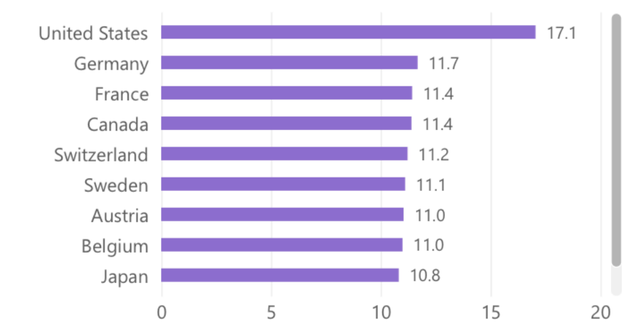

Top 10 Countries by Life Expectancy

Average life expectancy (years) | 2015–2024

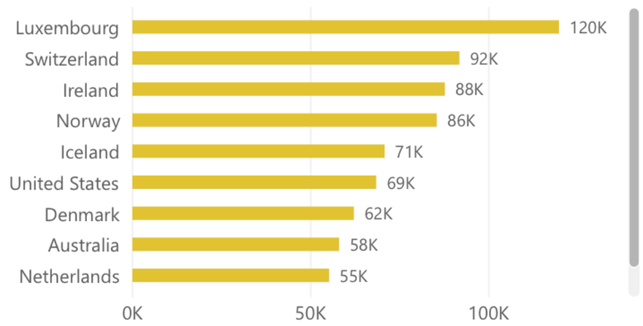

Top 10 Countries by Healthcare Expenditure

Average healthcare expenditure (% of GDP) | 2015–2024

Top 10 Countries by GDP per Capita

Average GDP per capita (current US$) | 2015–2024

Key insights

- GDP per capita shows he strongest association with life expectancy among the indicators analyzed
- Healthcare expenditure as a share of GDP has a weaker relationship with life expectancy
- Several countries achieve high life expectancy without being in the highest healthcare spenders
- National wealth and broader socioeconomic factors appear important in explaining differences in health outcomes
